

Tools for NLP

Rishu Kumar, Iuliia Zaitova, Chris Hyek

Saarland University

13.11.2023

Topics for today:

- ▶ introduction
- ▶ meta commands
- ▶ some useful commands
- ▶ loops
- ▶ pipelining
- ▶ custom history
- ▶ basic bash scripting

Don't fight linux, work with it.

Shell: Command interpreter

bash: Bourne Again Shell (Homage to Stephen Bourne)

Q. *But why do you stress on using command-line?*

Shell: Command interpreter

bash: Bourne Again Shell (Homage to Stephen Bourne)

Q. But why do you stress on using command-line?

Because it makes our life easier.

Shell: Command interpreter

bash: Bourne Again Shell (Homage to Stephen Bourne)

Q. But why do you stress on using command-line?

Because it makes our life easier.

Wanna merge pdfs, search for something in a text file, convert pdf into text, run something in the background while you enjoy your snacks?

Using your Terminal can be the best way to do all of that!!

Shell: Command interpreter

bash: Bourne Again Shell (Homage to Stephen Bourne)

Q. But why do you stress on using command-line?

Because it makes our life easier.

Wanna merge pdfs, search for something in a text file, convert pdf into text, run something in the background while you enjoy your snacks?

Using your Terminal can be the best way to do all of that!!

Also, because it's cool!

Let's look at some of the files which you would constantly use/modify during this tutorial series and beyond:

- ▶ *.bashrc*
- ▶ *.bash_profile*
- ▶ *.bash_aliases*
- ▶ *.bash_history*

But before that, let's understand some more basics

- ▶ *stdout*
- ▶ *stdin*
- ▶ *stderr*
- ▶ *stdbuff*

Let's glance over some basic calculation operations that we can have in our shells:

- ▶ `echo $((2+3))`
- ▶ `echo "2+3" | bc`
- ▶ `echo "2 3 + p" | dc`

Which one to use?

`bc` is standardised by POSIX and so is probably the more portable of the two (at least on modern systems). If you are doing manual calculator work then it is definitely the choice (unless you are somewhat of a masochist). `dc` can still have its uses though, here is a case where the reverse polish notation comes in handy. Imagine you have a program which outputs a stream of numbers that you want to total up, eg:

As this StackOverflow¹ user eloquently puts it, use `bc` instead of `dc`

¹Source: <https://unix.stackexchange.com/questions/124518/how-is-bc-different-from-dc>

Some commands which gives you information about your commands i.e. meta commands:

► **man**

Some commands which gives you information about your commands i.e. meta commands:

▶ `man`

▶ `info`

Some commands which gives you information about your commands i.e. meta commands:

- ▶ `man`
- ▶ `info`
- ▶ **`type`**

Some commands which gives you information about your commands i.e. meta commands:

- ▶ man
- ▶ info
- ▶ type
- ▶ **which**

Some commands which gives you information about your commands i.e. meta commands:

- ▶ man
- ▶ info
- ▶ type
- ▶ which
- ▶ **stat**

Now, let's look at some of the commands which are the most helpful to us as people in CL:

► **mkdir**

Creates a Directory

Now, let's look at some of the commands which are the most helpful to us as people in CL:

▶ `mkdir`

Creates a Directory

▶ `touch`

Creates an empty file

Now, let's look at some of the commands which are the most helpful to us as people in CL:

▶ `mkdir`

Creates a Directory

▶ `touch`

Creates an empty file

▶ `cat`

Displays content of a file

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ `mkdir` Creates a Directory
- ▶ `touch` Creates an empty file
- ▶ `cat` Displays content of a file
- ▶ `head` Displays 10 lines from start of file

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ **mkdir** Creates a Directory
- ▶ **touch** Creates an empty file
- ▶ **cat** Displays content of a file
- ▶ **head** Displays 10 lines from start of file
- ▶ **tail** Displays 10 lines from end of file

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ `mkdir` Creates a Directory
- ▶ `touch` Creates an empty file
- ▶ `cat` Displays content of a file
- ▶ `head` Displays 10 lines from start of file
- ▶ `tail` Displays 10 lines from end of file
- ▶ `less` Similar to **cat** but scrollable

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ `mkdir` Creates a Directory
- ▶ `touch` Creates an empty file
- ▶ `cat` Displays content of a file
- ▶ `head` Displays 10 lines from start of file
- ▶ `tail` Displays 10 lines from end of file
- ▶ `less` Similar to `cat` but scrollable
- ▶ **`find`** Finding files in a given directory

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ **mkdir** Creates a Directory
- ▶ **touch** Creates an empty file
- ▶ **cat** Displays content of a file
- ▶ **head** Displays 10 lines from start of file
- ▶ **tail** Displays 10 lines from end of file
- ▶ **less** Similar to **cat** but scrollable
- ▶ **find** Finding files in a given directory
- ▶ **grep** Finding content in a given file

Now, let's look at some of the commands which are the most helpful to us as people in CL:

- ▶ `mkdir` Creates a Directory
- ▶ `touch` Creates an empty file
- ▶ `cat` Displays content of a file
- ▶ `head` Displays 10 lines from start of file
- ▶ `tail` Displays 10 lines from end of file
- ▶ `less` Similar to `cat` but scrollable
- ▶ `find` Finding files in a given directory
- ▶ `grep` Finding content in a given file
- ▶ **`cut`** Cuts the content of lines on a delimiter

Some more:

► **rm**

Removes/Deletes a file

Some more:

▶ `rm`

Removes/Deletes a file

▶ `cp`

Copies a file

Some more:

▶ `rm`

Removes/Deletes a file

▶ `cp`

Copies a file

▶ `mv`

Moves a file

Some more:

▶ rm

Removes/Deletes a file

▶ cp

Copies a file

▶ mv

Moves a file

▶ scp

Securely copies a file to a server

Some more:

▶ rm

Removes/Deletes a file

▶ cp

Copies a file

▶ mv

Moves a file

▶ scp

Securely copies a file to a server

▶ **rsync**

Sync a file between different locations

Some more:

▶ rm

Removes/Deletes a file

▶ cp

Copies a file

▶ mv

Moves a file

▶ scp

Securely copies a file to a server

▶ rsync

Sync a file between different locations

▶ **sleep**

Introduces waiting time

Some more:

- ▶ `rm` Removes/Deletes a file
- ▶ `cp` Copies a file
- ▶ `mv` Moves a file
- ▶ `scp` Securely copies a file to a server
- ▶ `rsync` Sync a file between different locations
- ▶ `sleep` Introduces waiting time
- ▶ **`tee`** Copies stdin to file(s)

Some more:

- ▶ `rm` Removes/Deletes a file
- ▶ `cp` Copies a file
- ▶ `mv` Moves a file
- ▶ `scp` Securely copies a file to a server
- ▶ `rsync` Sync a file between different locations
- ▶ `sleep` Introduces waiting time
- ▶ `tee` Copies stdin to file(s)
- ▶ **`source`** Loads variables from a script

Some more:

- ▶ `rm` Removes/Deletes a file
- ▶ `cp` Copies a file
- ▶ `mv` Moves a file
- ▶ `scp` Securely copies a file to a server
- ▶ `rsync` Sync a file between different locations
- ▶ `sleep` Introduces waiting time
- ▶ `tee` Copies stdin to file(s)
- ▶ `source` Loads variables from a script
- ▶ `ssh` Connects a *secure shell* to a server

Some more:

- ▶ `rm` Removes/Deletes a file
- ▶ `cp` Copies a file
- ▶ `mv` Moves a file
- ▶ `scp` Securely copies a file to a server
- ▶ `rsync` Sync a file between different locations
- ▶ `sleep` Introduces waiting time
- ▶ `tee` Copies stdin to file(s)
- ▶ `source` Loads variables from a script
- ▶ `ssh` Connects a *secure shell* to a server
- ▶ **`crontab`** Executing one task on a given interval/time

Even more:

▶ `sed`

Edits stream of output

Even more:

▶ `sed`

▶ `gawk`

Edits stream of output

Pattern processing (a PL)

Even more:

▶ sed

▶ gawk

▶ **rev**

Edits stream of output

Pattern processing (a PL)

Reverses a string

Even more:

▶ sed

Edits stream of output

▶ gawk

Pattern processing (a PL)

▶ rev

Reverses a string

▶ **kill**

Kills a process

Even more:

▶ sed

Edits stream of output

▶ gawk

Pattern processing (a PL)

▶ rev

Reverses a string

▶ kill

Kills a process

▶ **sudo**

Gives you POWER

Even more:

▶ sed

Edits stream of output

▶ gawk

Pattern processing (a PL)

▶ rev

Reverses a string

▶ kill

Kills a process

▶ sudo

Gives you POWER

▶ curl

Downloads files

Even more:

▶ sed

Edits stream of output

▶ gawk

Pattern processing (a PL)

▶ rev

Reverses a string

▶ kill

Kills a process

▶ sudo

Gives you POWER

▶ curl

Downloads files

▶ wget

Also downloads file

Even more:

▶ sed

Edits stream of output

▶ gawk

Pattern processing (a PL)

▶ rev

Reverses a string

▶ kill

Kills a process

▶ sudo

Gives you POWER

▶ curl

Downloads files

▶ wget

Also downloads file

▶ date

Gets you the current time

Even more:

- ▶ sed Edits stream of output
- ▶ gawk Pattern processing (a PL)
- ▶ rev Reverses a string
- ▶ kill Kills a process
- ▶ sudo Gives you POWER
- ▶ curl Downloads files
- ▶ wget Also downloads file
- ▶ date Gets you the current time
- ▶ **history** Gives you few last run commands

.bash_aliases DEMO!!

Custom History **Going through the function**

Bash Script DEMO!!
